Key Benefits

Peace of Mind - You can feel confident that your eLearning application is in expert hands. **Best Value for Money** - Affordable solutions allow even the smallest client to perform at the highest operating level possible.

Advanced Security - Availability, redundancy, highly reliable uptime, and data protection ensure that your programs are secure, well managed, and run smoothly.

Scalable Infrastructure - Scale your environment as required to support your growth. Even smaller environments can benefit from an advanced platform without the system challenges for support, and growth.

Flexibility - Customizable hosting options give you the ability to select offerings appropriate to your unique requirements.

Our network

Hosting clients are located on multiple isolated virtual servers which together with our hosting partners offer the best possible network infrastructure:

- Fully redundant network architecture with no single points of failure
- Industry-leading network bandwidth capacity: 120+ gigabits/second
- Multiple layers of network security
- Centralized network monitoring in the Network Operations Center (NOC)
- Multiple concurrent, high-capacity Tier 1 bandwidth providers

Security

We combine a cutting-edge security technology, best practices and a team of certified senior-level professionals to help ensure that you can safely manage and grow your business. Using state-of-the-art traffic profiling and anomaly detection capabilities, we manage and secure our networks, pinpoint and troubleshoot network attacks, monitor your servers and applications, and analyze network security performance issues.

DDoS Attack Response

Once a DDoS attack is detected and confirmed by the Network Operations Center, the affected traffic is routed through a DDoS Mitigation Service. This filters out the attack traffic and allows the legitimate traffic to continue to its original destination. When the attack has subsided, the original direct path between the destination and the rest of the Internet is restored.

Backups

We perform daily and biweekly backups on all clients' data ensuring quick recovery on case of emergency. Our backup strategy includes full server images that can revert to full servers in minimum amount of time.

Structure and Pricing
