- ❖ **Fulfill** the inner-organization communication needs
- ❖ **Preserve** the company knowledge
- ❖ **Certify** the employee knowledge

The Challenge of Improving the People Inside the Company

People is the company's most valuable asset. This is not simply an ascertainment but the core element that will make the difference giving competitive advantage to your enterprise. Several international reports pin-point that the efficient management of humans, their skills and abilities **is the most** crucial success factor for the company. However, in practice, collecting, organizing and managing user-related data, as well as, improving their abilities through formal training paths is a daunting task.

eFront Enterprise™ offers a coherent approach to the management of an organization's most valued assets - the people working in the company. eFront Enterprise™ builds on eFront core and includes a wide range of added functionality from extended personnel, branches and group management to skills and users-to-lesson automatic assignment. Following the eFront philosophy, it focuses on comprehensibility and user-friendliness.

eFront Enterprise™|Built on eFront Core

eFront | An easy to use, visually attractive, SCORM compatible (and certified), eLearning and Human Capital Development system. It is suitable for both company and educational usage.

Easy to use | eFront was build from the scratch with the end user in mind. You will find it rather natural to get used to its interface where most options are self-explanatory.

Visually attractive | We didn't want to build another eLearning tool. We aim at building the most beautiful eLearning tool.

Technologically advanced | eFront is an Ajax enabled, Unicode, LDAP and SCORM supporting, multilingual eLearning platform.

Pedagogical concepts | Integrated to eFront are sound pedagogical concepts that guide users and keep them motivated.

Complete | eFront includes a wide variety of components that help you create your lesson structure and add content, build online-tests, communicate with others, track users history and progress, conduct surveys, assign projects, and create certifications. And this list just scratches the surface of the system.
